Profile

Software Engineer comfortable working with Linux command-line tools, with experience in mobile application development. Skilled in building RESTful APIs and applying Clean Architecture. Experienced in developing cross-platform mobile applications using Flutter and Dart, with a focus on responsive and user-friendly design. Familiar with Python and Node.js, with basic knowledge of frontend technologies (HTML, CSS, JavaScript) and databases (SQL). Have working knowledge of Odoo development. Focused on delivering efficient, maintainable, and scalable software solutions.

Experience

Magnet Company, Web App(Client Project) 07/2024 – 10/2024
Freelance

- Developed a modern, responsive website for a magnet manufacturing company using React for the frontend and Node.js for the backend.
- The site showcases product categories, detailed product information, and a contact system.
- Live Demo:[Website [🔗](#)]

AlmohandesLink App, Laptop Sales App (Client Project) 06/2024
Freelance

- Description: A mobile app connecting users to buy and sell laptops efficiently.
- Technologies & Key Contributions: Developed using Flutter and Dart with Clean Architecture principles. Managed state using Cubit integrated RESTful APIs for product listings, orders, and payments. Optimized UI/UX for smooth user experience.
- Results & Impact: Achieved 100+ downloads within the first release phase.
- Live Demo: [Play Store [🔗](#)]

Tayarko App, Delivery App (Client Project) 07/2025 – 09/2025
Freelance

- Description: A mobile app connecting users with drivers in real-time to facilitate delivery services in Aswan.
- Technologies & Key Contributions: Developed using Flutter and Dart with Clean Architecture principles. Managed state with Cubit, integrated SignalR for real-time updates, and used RESTful APIs for handling orders and deliveries efficiently.
- Results & Impact: Achieved 100+ downloads within the first release phase.
- Live Demo: [Play Store [🔗](#)]

Education

BSc. Computers & Information, Assiut University 2020 – 2024
Egypt

- GPA: good (2.92/ 4.00)
- Graduation Project: SMSARK APP
- Project grade: Excellent (A)

Technical Skills

- **Operating System:** Linux (Ubuntu)
- **Databases:** SQL Server
- **Frontend:** HTML, CSS, JavaScript
- **Tools:** Git, GitHub, Postman, Swagger, Android Studio
- **Languages:** Dart, C++, Python
- **Fundamentals & Concepts:** OOP, SOLID, Clean Architecture, REST APIs, MVVM, Design Patterns

Projects

Doc Doc App, *Doctor Appointment Booking App*

- Description: A mobile app for booking doctor appointments efficiently, managing schedules, and receiving notifications.
- Technologies & Key Contributions:
 - Built using Flutter & Dart, following Clean Architecture principles.
 - Managed state with Cubit and leveraged Freezed for immutable data classes.
 - Used Retrofit and JSON Serializable for API integration and data parsing.
 - Applied Flutter Flavors for multiple environments and implemented CI/CD pipelines.
 - Integrated Netlify for backend hosting and deployment.
